PROJECT DETAILS (M-TECH):

TITLE: CHANGES IN PHYSCO-CHEMICAL CHARACTERSTICS OF WASTEWATER AFTER USING SBR TECHNOLOGY

This project covers the description about 130 MLD Sewage Treatment plant and reuse plant (Atomized and SBR Technology type) located at Bhandewadi Nagpur. The project was successfully carried out and we observed the Seasonal variations, the overall efficiency of SBR is higher than ASP at low cost and less space for continuous flow and even intermittent flow. Along with minimum time required to produce end product. This provides preference to SBR in Selection Technology for Biological Treatment of wastewater.
